Website Audit & Redevelopment Proposal La Salle School Homa Bay

Prepared for: Assistant Administrator, La Salle School Homa Bay

Prepared by: Victor Otieno Ochieng, Founder & Software Engineer, Kijani Systems

Date: 14 July 2026

Executive Summary

Following my visit to the school and the request to review the institution's website, I carried out an assessment of its design, usability, branding, content structure, technical implementation and opportunities for improvement. The website is functional and actively maintained; however, it no longer reflects the premium educational experience, innovation and institutional excellence that the school delivers. A modern redesign would strengthen admissions, parent engagement and the school's public image.

Key Findings

- Outdated homepage and visual hierarchy.
- Crowded layouts and inconsistent imagery.
- Legacy template content requiring cleanup.
- Opportunities for stronger branding, SEO, performance and security.
- Missing modern features such as online admissions, parent portal, testimonials, virtual tour and richer calls to action.

Recommended Scope

1. Complete UI/UX redesign.
2. Responsive mobile-first implementation.
3. Improved information architecture.
4. Content migration and optimization.
5. SEO optimization.
6. Security hardening.
7. CMS for easy updates.
8. Future integration with admissions and parent services.

Proposed Deliverables

A fully redesigned website, administrator documentation, staff training, post-launch support, analytics setup, performance optimization and ongoing maintenance options.

Implementation Approach

The project would be executed in phases: discovery, UI/UX design, development, content migration, testing, deployment and post-launch support to minimize disruption while ensuring quality.

Closing

Having completed this review, I respectfully request the opportunity to partner with La Salle School Homa Bay through Kijani Systems to undertake the redevelopment of the school's website. I am confident that I can deliver a modern, secure and scalable digital platform that accurately represents the institution's reputation and supports its long-term strategic objectives. I would appreciate the opportunity to present a live prototype, discuss the proposed implementation timeline and provide a detailed quotation.
